

# Be prepared for an emergency

Heat kills -- get help right away!

### If someone in your crew has symptoms:

- 1) Tell the person who has a radio/phone and can call the supervisor -- you need medical help.
- 2) Start providing first aid while you wait for the ambulance to arrive.
- 3) Move the person to cool off in the shade.
- 4) Little by little, give him water (as long as he is not vomiting).
- 5) Loosen his clothing.
- 6) Help cool him: fan him, put ice packs in groin and underarms, or soak his clothing with cool water.

### When you call for help, you need to:

- Be prepared to describe the symptoms.
- Give specific and clear directions to your work site.

# 3

# Heat illness can be prevented!

At our work site, we have:

**Water**

**Shade to rest and cool down**

We are extra careful when there is a heat wave or temperature goes up. Then we may change our work hours, and we all need more water and rest.

**Training and emergency plan**

# 4

OSHA 3431-04N 2011

# Health effects of heat

Two types of heat illness:

## Heat Exhaustion

## Heat Stroke

**Watch out for early symptoms.** You may need medical help.

People react differently — you may have just a few of these symptoms, or most of them.

**1**

# Stay safe and healthy!

**WATER. REST. SHADE.** The work can't get done without them.

**Drink water even if you aren't thirsty — every 15 minutes.**

**Rest in the shade.**

**Watch out for each other.**

**Wear hats and light-colored clothing.**

**"Easy does it"** on your first days of work in the heat. You need to get used to it. Rest in the shade — at least 5 minutes as needed to cool down.
